Predictive Modeling

Predictive modeling uses historical data to make informed guesses about future or unseen outcomes

Involves building models that learn patterns from data and can generalize to new cases.

Common examples:

- Movie recommendations
- Detecting spam emails
- Email spam filtering

 New Jersey officials urge residents to stock up for a two week #coronavirus quarantine "Just in case"

 I have instructed that insurance companies make COVID-19 testing free. This important step will help ensure cost barriers do not stand in the way of people getting tested.

 Come on guys, please be like bob!

 If 1,000,000 get infected with a 2% death rate for the #coronavirus then 20,000 will die in USA.If you don't have money to stock up food, then find a fishing hole and supplies to hunt and fish!

Trained Classifier Model

Extremely Positive

I have instructed that insurance companies make COVID-19 testing free. This important step will help ensure cost barriers do not stand in the way of people getting tested.

Positive

Come on guys, please be like bob!

Neutral

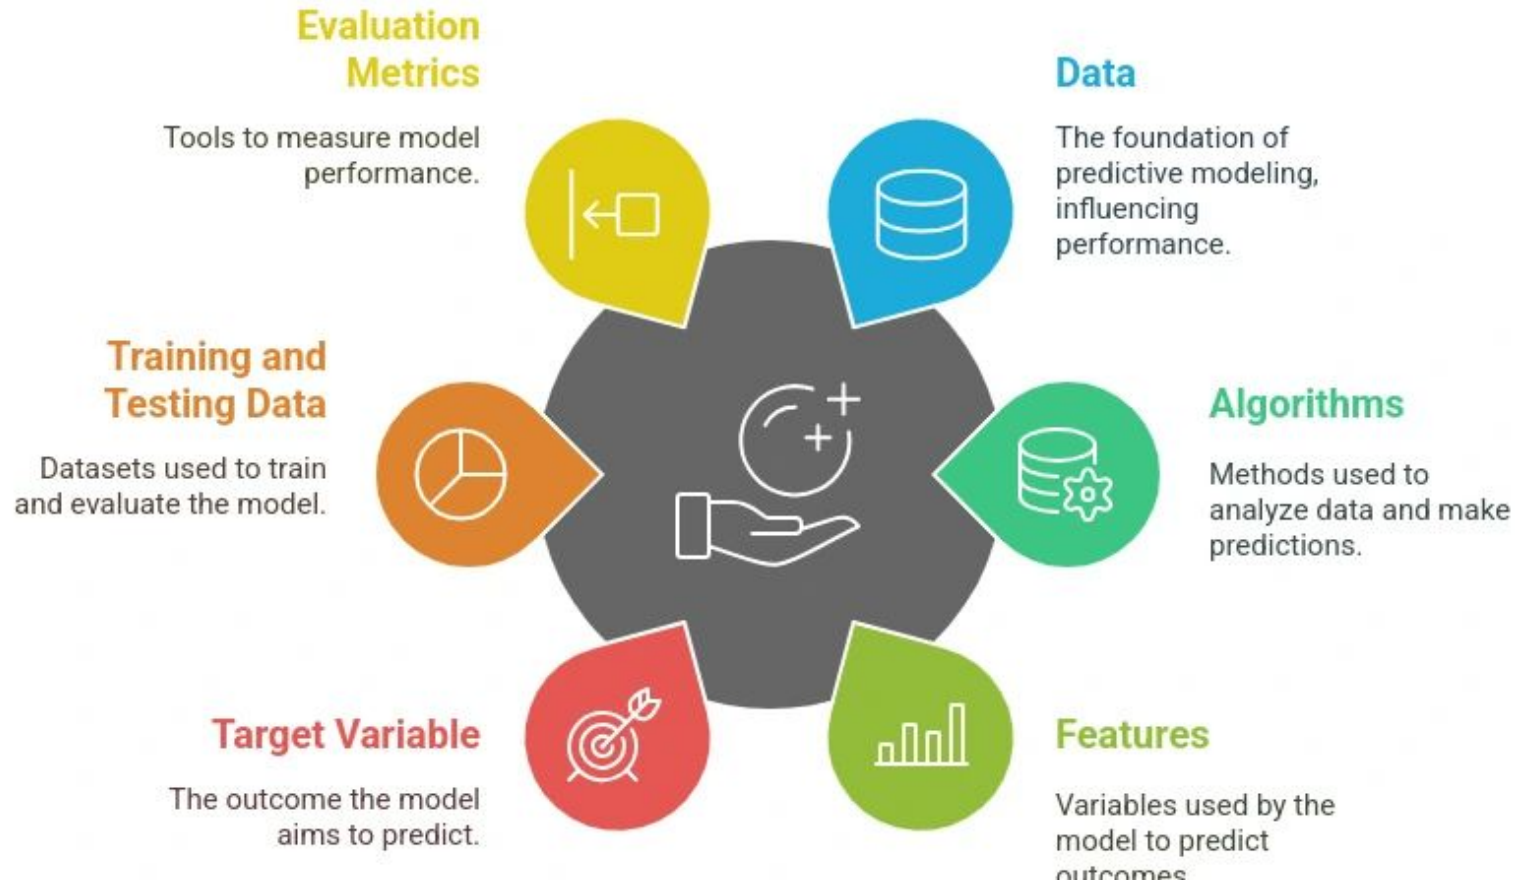

New Jersey officials urge residents to stock up for a two week #coronavirus quarantine "Just in case"

Negative

Extremely Negative

If 1,000,000 get infected with a 2% death rate for the #coronavirus then 20,000 will die in USA.If you don't have money to stock up food, then find a fishing hole and supplies to hunt and fish!

Components of Predictive Modeling

Predictive Modeling Workflow

1. Prepare Data
Clean and preprocess features
2. Select Model Type
E.g., logistic regression, decision trees, neural networks
3. Train the Model
Fit the model on historical data
4. Evaluate Performance
Use metrics like accuracy, precision, RMSE, etc.
5. Make Predictions
Apply model to new/unseen data

Role of LLMs in Predictive Modeling

- Data Understanding
Get summaries, identify missing values or types
- Feature Engineering
Suggest new features, extract from text
- Model Selection
Recommend algorithms suited to your task
- Code Generation
Write code for training, tuning, and evaluation
- Result Interpretation
Explain model outputs in plain language

Come on guys, please be like bob!
