ISCIENCE-D-20-00777
"A fully open-source framework for deep learning protein real-valued distances"

Dear Dr. Adhikari,

Thank you for your work and interest in Cell Press. We would like to remind you of our recent offer to transfer your manuscript. If you have an active rebuttal with the journal, you may disregard this reminder.

Please be aware that the ability to transfer directly via Editorial Manager will automatically expire on May 29, 2020, causing the system to automatically decline on your behalf. You can accept the transfer invitation directly within EM at [Agree to Transfer](#). This link will bring you to a page where you can select the journal, and your files will be automatically transferred. Please note that you will be able to update your materials before they are delivered to the editor; for more information on the transfer process, please read [here](#).

If you have questions about transfer to any particular journal, please feel free to reach out to the editors of that journal directly. We would like to help you find a good home for your paper and are happy to talk to you if you would like to explore your options before making a decision.

If you are interested in transferring but would like more time to complete revisions, we encourage you to go ahead and accept the transfer offer now. This will allow you to take advantage of the transfer system while retaining the ability to edit/revise your manuscript before it is formally submitted and assigned a manuscript number.

If you decide not to transfer this manuscript to any of the included journals, you may decline the invitation at [Decline to Transfer](#).

Finally, if you prefer, you do have the choice of submitting this manuscript or a revised version of it to another Cell Press journal as a regular new submission. Please do not hesitate to contact the target journal should you wish to inquire about suitability.

Yours sincerely,

Sonja Pylvainen

Exciting science needs to be shared, and fast. That's why we launched Cell Press Sneak Peek, an author opt-in preview of the papers under review in our primary research journals. Sneak Peek makes papers discoverable earlier in the publication process—so authors can surface their research quickly and readers can build on their work. Now hosted on SSRN, Sneak Peek 2.0 has improved search and easy access to abstracts. DOI registration and single article links means papers posted to Sneak Peek can be cited.

Go on, satisfy your curiosity! [Visit Sneak Peek](#).

In compliance with data protection regulations, you may request that we remove your personal registration details at any time. ([Remove my information/details](#)). Please contact the publication office if you have any questions.
